

Summary

I'm a UX/UI designer who doesn't stop at putting complex problems on screen — I structure them so users can judge and act.

I've designed B2B decision-making tools and a design system, owning everything from IA and UX/UI to design policy documentation and collaboration with developers.

I used coding agents to define design verification criteria and checked the built result against them.

Projects

Shoot Shoot Penguin - Sports Community · Design System · Guest Matching App

Feb 2026 – Present · In development · Team of 2 (1 designer, 1 developer) · Owned all design, co-led product planning

- In a two-person team, designed the product plan, IA, UX/UI and design system, and worked with the developer through implementation.
- To cut down on repeated UI decisions, organized design tokens and components from measured values on existing screens and documented them as guidelines.
- Used coding agents to turn verification criteria into code, so implementations outside the allowed tolerance are caught in checks.

Operator - B2B SaaS · Decision Support Dashboard

7 weeks · Team project / 2 designers · Co-owned the full process (led personas, user journey, usability testing) · Product design project

- Researched small business owners' HVAC operating environments and rate structures, and structured complex operational information into a decision flow that can be read quickly.
- Designed the dashboard UX and core feature policies, leading from current status → diagnosis → recommended action.
- In usability testing with 5 participants, found that 4 stalled at sign-up; cut required inputs from 7 to 3 and reached a SUS score of 76.

BingX AI Master - Fintech · AI Trading

8 weeks · Team project / 2 designers · Co-owned the full process from research to usability testing · Redesign project

- Analyzed users' decision-making flow in AI-powered trading features and designed UX/UI improvements.
- Through user testing, resolved confusion between the AI's role and the user's own judgment, reaching a SUS score of 88.

EXPERIENCE

bbb Korea (non-profit) - Probono Coordinator

Jun – Aug 2026 · 3 months

- Oversaw 11 members across 3 teams in an interpretation volunteer program, coordinating schedules, roles, content production and event operations.
- Set up per-team work guides and a feedback process, shared progress, and managed collaboration between members.
- Planned the program's key events, including the launch and closing ceremonies, coordinating schedules and materials with multiple stakeholders.

Wizzy Bakeshop - Founder

2022 – 2024 · 2 years 2 months

- Ran every part of a dessert brand myself, from product development to orders, inventory, settlement and customer service.
- Designed the brand identity, packaging, in-store posters and other promotional materials myself.

Education

Blossom UX School (UK)
Product Design Bootcamp
Oct 2025 – May 2026 · 624 hours

- User Research · HCI/Usability
- Prompt Engineering · Vibe Coding

Mokpo National Maritime University
B.S. in Navigation
2018 – 2025 · GPA 4.01 / 4.5

Skill

Figma
Variables · Components · Auto Layout
Prototyping Design · Design System

AI Flow
Claude Code · Antigravity ·
Prompt Engineering · HTML/CSS
